

Fallen Leaves Bring Life

You can create your own ecosystem. An ecosystem refers to all the living things (plants, animals and organisms) found in a particular location.

Select a spot in your yard or garden. Place a pile of fallen leaves on the soil. After three days, observe what has happened. How about after a week?

My Observation Report

	After 3 days	After a week
What colour are the leaves?		
Are the leaves wet or dry?		
Dig through the pile of leaves. How does it smell?		
Do you notice any plants, insects or other animals? Identify them.
